

Science Olympiad — Purdue 2025

Codebusters

Exam Preparation

You will need:

1. Folders for each of the teams to hold the tests
2. Sufficient copies of the test for all teams. They don't need to be stapled.
3. Multiple timers which have a lap function on them - ideally one per volunteer. The timer app on an iPhone or Android Phone that has a stopwatch function with lap function is sufficient.

Before the event begins:

1. Practice starting the timers and using the lap function to record the times. Make sure volunteers understand how to use the lap function and are not accidentally stopping the timer completely.
2. Memorize the answer to the timed question.
3. Check to make sure that this key matches the test you are proctoring.
4. Place one copy of the test for each team in the provided folders with the first page outside the folder.
5. Adjust desks and chairs – teams may have up to 3 students for this event.

Running the Event

1. When the students enter the room, instruct them to sit down, DO NOT OPEN THE FOLDER, and put their names, school name and school number on the first page.
2. Encourage them to write their team number on all the other pages AFTER they begin the test. This way if their papers gets separated from each other we can make sure to give them credit.
3. **CRITICAL:** Check to see that students have ONLY brought
 - i. Something to write with (pencils, pens, erasers, highlighters)
 - ii. Five function calculators (addition, subtraction, multiplication, division, and usually square root). The calculator can have a simple memory store/recall function but must not have a modulus or other scientific and programmable functions. If their calculator doesn't meet these requirements, they may not use it.
 - iii. If the student has a smart watch (Apple watch, Samsung Gear, etc.) they will need to put it away.
4. Instruct the students that if they answer the timed question within 10 minutes, they can be awarded a bonus if they solve the timed question with no more than 2 letters incorrect.
 - i. When they have a solution for the cryptogram they should raise their hand.
 - ii. Let them know that you will announce when the 10-minute time is up. After the first 10 minutes, no additional bonus points will be awarded.
 - iii. When you see a team raise their hand, hit the LAP function and head to the team.
 - iv. Determine if their answer is correct (see next page for grading), If so, write the time on their score sheet.
 - v. If their score is incorrect (more than 2 letters incorrect), tell the team that the answer is wrong, but DO NOT tell them what is wrong. They can continue to work on the question and raise their hand again to be checked. A team has an unlimited number of attempts during the 10-minute bonus.
5. Tell the teams that they do not have to fill in the frequency table. It is simply there as an aid to them solving the cryptogram. It will not be graded.
6. Some students may never have used a non-scientific calculator. You should have them enter a simple formula on their calculator: $1 / 26 = * 26 = ..$ Most will be surprised to see that the answer is not rounded to 1 as they expected but .9999999999

7. When the timers hit the 10-minute point, announce that no bonus points will be awarded and put away the timers. The students may continue to work on the question, but they may not receive any extra points.
8. A team is not restricted to only the timed question during the 10 minutes. They can move on or split up the work if they would like, but it is in their best interest to try for the bonus.
9. When time is up, have the students put writing instruments down and put their answer pages back into the folder in the correct order.

How to grade

1. Teams can have up to two incorrect letters total on their cryptogram and still be correct. The frequency of the incorrect letter is irrelevant. See the example below.

If the cryptogram was as shown:

KZBAOF KFXMFXYF

SAMPLE SENTENCE

and the students answered (underlined letters indicate mistakes)

SAMPLE SENTENCE

then it counts as four mistakes (even though the mistake was only in the letter E) and the answer DOES NOT count. However, if they put

SAMPUL SENTENCE

It is considered correct with two letter mistakes.

2. For questions which have a numeric answer (such as determining the a= and b= values), Cryptarithms, or ask for the keyword/key phrase to be decoded, no mistakes are allowed.
3. When teams are asked to provide a keyword/key phrase for an aristocrat, there will be a set of boxes under the question which say "Enter the Keyword here" or "Enter the Key Phrase here". For these problems, only the answer in those boxes is to be graded (the actual cipher solution is ignored) and they are not allowed any mistakes for the full score. For each letter mistake, 100 points are to be subtracted until the score is zero.
4. Teams do NOT have to fill in the frequency table. It is simply there as an aid to them solving the cryptogram. It is NOT to be graded. It is included in the answer key as an aid to the grader.
5. When scoring the Baconian ciphers (with strange text or symbols), they can write the answer under the Baconian symbols or on the line provided. Note that you will see lots of As and Bs, but they are not graded as the answer, only what they put on the answer line.
6. As you score each question, if correct, put the number of incorrect letters (0, 1, or 2) next to the question number on the scoring page. Also, put the value for the question into the score column. If they get more than 2 letters wrong, subtract 100 points from the score until it would be zero. If a question is worth 240 points and they get 4 letters wrong, you would start with 240 points (for up to 2 letters wrong) and then subtract 100 points for each of the next two letters wrong ending up with a final score of 40 points for that question. If they had gotten 5 or more letters wrong on a 240 point question, they would receive 0 points for that question. With a 650 point question, they could get 8 letters wrong and receive 50 points (2 free letters then $6 \times 100 = 600$ points off). Just put the incorrect cost deduction on the score sheet and subtract it from the value for the question. Under no circumstance should the score for any question be less than zero. Note that while the timed question must have 2 or fewer letters incorrect in order to get the timing bonus, a team solving the timed question after the 10 minutes passed would be accepted as correct with 3 incorrect letters receiving 100 points for the timed question.
7. When scoring questions, if they actually did any work on the question and got some letters right, it is useful to write "LOTS" for the question on the score sheet. In this way it is really easy to break ties without having to go look at each question.

8. On a test with Special Bonus Questions (indicated by a ★), if they receive full score for the corresponding question, they will receive an additional bonus depending on the number of special bonus questions they answered. If they answered any one with no deduction points they receive 150 extra points. If they answered any two they receive 400 extra points. If they answered all three then they receive 750 extra points. A legend is at the bottom of the score sheet to make it easy to figure out the extra bonus.
9. If they correctly answered the timed question in 10-minutes or less with 2 or fewer letters incorrect, you need to compute the bonus time. Take the value for the minute from this first table below

0:xx	1,080	1:xx	960	2:xx	840	3:xx	720	4:xx	600
5:xx	480	6:xx	360	7:xx	240	8:xx	120	9:xx	0

and then add the seconds value from this table:

X:00	120	X:01	118	X:02	116	X:03	114	X:04	112	X:05	110
X:06	108	X:07	106	X:08	104	X:09	102	X:10	100	X:11	98
X:12	96	X:13	94	X:14	92	X:15	90	X:16	88	X:17	86
X:18	84	X:19	82	X:20	80	X:21	78	X:22	76	X:23	74
X:24	72	X:25	70	X:26	68	X:27	66	X:28	64	X:29	62
X:30	60	X:31	58	X:32	56	X:33	54	X:34	52	X:35	50
X:36	48	X:37	46	X:38	44	X:39	42	X:40	40	X:41	38
X:42	36	X:43	34	X:44	32	X:45	30	X:46	28	X:47	26
X:48	24	X:49	22	X:50	20	X:51	18	X:52	16	X:53	14
X:54	12	X:55	10	X:56	8	X:57	6	X:58	4	X:59	2

For example if they solved the time question at the 6:46 mark, you would add 360 (from the 6:xx entry in the first table) to 28 (from the X:46 entry in the second table) to get a bonus of 388. If they had solved it in exactly 4:00 minutes, you would add 600 and 120 to get a bonus of 720.

10. Add up all the scores and put the total on the bottom of score sheet.
11. You must break all ties. Indicate the tie breaker by adding .1 to the score of the team ahead. With multiple teams tied, you will add more. I.e. if five teams all scored 200 points, the final scores that you would enter on the score sheet would be 200.4, 200.3, 200.2, 200.1 and 200.
12. To determine how to break the tie, you need to look at the correctly answered questions in the order from the table below. If both teams answered the same (i.e. they answered the question with zero mistakes) then you go on to the next question. If one team had no mistakes and the other team had one mistake, then the team with no mistakes is ahead. For example, if one team answered question the highest value question and another team didn't, the first team will be ahead.

Tie Breaker Order	Question #
-------------------	------------

1	9
2	20
3	15
4	18
5	16
6	8
7	11
8	22
9	6
10	1
11	5
12	4
13	21

Tie Breaker Order	Question #
14	10
15	Timed
16	13
17	19
18	12
19	7
20	17
21	3
22	2
23	14

13. If there is still a tie (typically when you have teams which answered either zero, one or two questions) then you will need to look at the tie breaker questions again and count the number of correctly answered letters. The team with the most correctly matched letters is to be ahead.

Timed Question [250 points] Solve this **Aristocrat** which is a quotation from Purdue alum Neil Armstrong. When you have solved it, raise your hand so that the time can be recorded and the solution checked.

LZ FCXXMJGB FZKCVH OM ZSEZ ZSEZ ZLJB AME, AKMZZB EJX

19) [200 points] Solve this complete columnar cipher with an odd number of columns and the crib CHIMNEY. The solution is a quote from *Mary Poppins*.

RHLRD STBEN IEEOD FWTBI SDMES LAEHO URTTN PHEOO

AAEHT SCSSH YTGTE SREYX TETEO STDAH ESEWR UNTIE

HAHW

Answer:

HERE'S THE WHOLE WORLD AT YOUR FEET. AND WHO GETS TO SEE IT BUT THE BIRDS, THE STARS, AND THE CHIMNEY SWEEPS

20) [600 points] Solve this **Spanish Aristocrat** that is from an insane movie that I watched in class in 9th grade. The last letter decodes to an "R."
